## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Terminal Disclaimer*

1. The terminal disclaimer filed on 12/07/05 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of 10/803,272 has been reviewed and is accepted. The terminal disclaimer has been recorded.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Uraki et al. (U.S. Patent 5,977,515) in view of Otsudo et al. (U.S. Patent 6,507,000).

As to claims 1-20, Uraki et al. discloses an apparatus and its method as shown in figures 1-25 comprising:

a laser base unit (6) adapted to provide laser light to an interaction region, the laser base unit comprising a laser generator (27) and a laser head coupled to the laser generator; an anchoring mechanism (11) adapted to be releasably coupled to the structure and releasably coupled to the laser head; and a controller electrically coupled to the laser base unit (6), the controller adapted to transmit control signals to the laser.

Art Unit: 2841

base unit in response to user input, the base unit (6) contained within a chamber (38) containing a mirror (40), and lens (7).

Uraki disclose all of the limitations of the claimed invention (see figures 1-25), but does not specific disclose the laser head adapted to removed the material from an interaction region.

Otsudo et al teaches a dust collector for a laser machine comprising a containment collector placed between a lens table (1) of a laser and a workpiece (4), the machine is collected in the containment area (B) and then swept out through (7a).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use a teaching of Otsudo et al. employed in the chamber of Uraki et al. in order to yield and optimal product.

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jimmy Vu whose telephone number is 571-272-1832. The examiner can normally be reached on M-F.
